

Installation:

1st nut should be spanned with 40 - 45Nm.

2nd nut should be brought at least to a snug-tight condition, with special care being given to avoid over-tightening.

Nut-marking should be made acc. to figure after torque.

Maintenance:

Visual inspection of bolt torque and any loose items is made 1 year after installation, and afterwards every 5th year.

Check if the marking from bolt torque is still straight.

Check if the corrosion protection system is satisfactory.

Any findings must be repaired as soon as possible.
