# Triangular Tower DATA SHEET

Product no. Ref. nr. Latest rev. S TEL 36M-S-ML-00 02.01.01.22 10.11.2021

## **Series TEL**

36m TEL - Strong

#### **Description:**

The given tower is designed as an equilateral triangle, with a fully welded steel lattice structure, composed by legs and bracings made of solid round bars.

The tower can be prepared for installation of a 2 m toppole.

The TEL series tower is used for most areas in Denmark (vb=27 m/s, terrain category I).

#### **Specification:**

Total theoretical tower weight = 6340 kg Leg distance at tower base = 2000 mm Foundation bolts: 12 x M36

The steel is hot dip galvanized according to DS/EN ISO 1461.

The design of the lattice tower is made according to:
DS/EN 1993-3-1 – Design of steel structures – Towers, masts and chimneys.
DS/EN 1991-1-4 – Actions on structures – Wind actions.

The tower is designed for three operators equal to  $15 \, \text{m}^2$  wind drag area equally distributed over the top  $9 \, \text{m}$ .

Ladder with hoops from base to top  $-0.14 \text{ m}^2/\text{m}$ .

or

Ladder with fall arrest rail from base to top  $-0.17 \text{ m}^2/\text{m}$ .

The following feeder load is assumed:

0,20 m<sup>2</sup>/m for each operator, (total of 0,60 m<sup>2</sup>/m) distributed on 2 sides.

#### Foundation types:

Normally a traditional Pier & Pad foundation is designed and casted for a TEL tower.

Carl C. can assist with the design if required, based on site specific geotechnical specifications.
